1 - Introduction

The Iowa Department of Education is committed to helping districts and schools collect and report state mandated BEDS, State ID, and EASIER student data in a more timely and automated manner. New web-enabled software tools are available to all LEAs to facilitate the collection of this data using SIF.

The *Schools Interoperability Framework™* (SIF) standard describes both a data model and a transport mechanism by which data is securely requested from, routed, and delivered to authorized applications. Several application vendors already provide SIF-enabling extensions (agents) for their software although most support only a small number of SIF objects and data elements. The full SIF Implementation Specification can be found at http://www.sifassociation.org.

1.1 Purpose

The purpose of this document is to provide application vendors with the information needed to successfully develop SIF agents in compliance with Iowa Department of Education State Reporting. Districts and schools are encouraged to work with their application vendors to ensure a suitable SIF agent is available and able to publish the data needed to best represent their interests with the state.

The information in this document is provided in addition to and in concert with current DE publications for data definitions. As such, there is no attempt here to replicate DE data element definitions, code sets, or to describe business logic or validation rules except where further explanation or context is needed.

1.2 How to Use This Document

This document contains SIF object definitions and explanations that facilitate the collection of data for DE systems. While the SIF specification contains in excess of 250 SIF objects and services, only those applicable to DE state reporting are documented in this profile. Accompanying each object are notes on usage and expected behaviors, including whether support for SIF events is needed or not.

SIF mappings are based on *SIF Implementation Specification v2.4*. DE data elements are mapped to existing SIF objects and data elements where possible. SIF extended elements are used in cases where no suitable mapping is available. DE data element codes are used within the SIF object definitions to signify the element mapping.

The Appendix provides code sets for data elements as they pertain to DE and other useful information not generally found in other DE documents or in the SIF object definitions.

1.3 Data Collection Workflow

State reporting personnel within districts and schools (LEAs) are given access to a secure web portal through which they can direct the collection, validation, and submission of state reporting data. These folks are given complete control over state reporting processes and decide when it is appropriate to approve the data and submit it to DE. The portal facilitates the collection of data using SIF (preferred) but may for some collections accept an existing extract file when a suitable SIF agent is unavailable. Validation ("edit") checks are performed against collected data and the results are made available for review. Any data issues need to be corrected in the source system. Data previews are available in the software to assist in determining whether the data set is complete and ready for submission. This process can be automated, alerting state reporting personnel of any issues via email notification.

From a vendor perspective starting a collection causes SIF Requests to be sent to the local SIF zone. Responses are stored into a SQL database and transformed from SIF objects into the formats required for delivery to the state. Transformation logic determines how and what data is used and validation checks determine whether the data is complete enough for submission. Validation checks can be as simple as checking to make sure a value is provided to looking up a value within a long, dynamic list or even something more complex involving multiple columns and tables. DE has complete control over the logic used within each collection and can publish logic (manifest) updates without a software upgrade.

1.4 Uniq-ID Automation Workflow

LEAs are able to acquire Uniq-IDs for students automatically when using a capable SIF agent. When a student is added to the local Student Information System (SIS) the corresponding SIF agent generates a SIF Add event on the StudentPersonal and StudentSchoolEnrollment objects. These events cause the SIF agent for Uniq-ID to generate a formal request for a Uniq-ID from the state hosted Uniq-ID system. Upon successful resolution the assigned Uniq-ID is delivered to the local SIF zone in the form of a SIF Change event on the StudentPersonal object for the StateProvinceId. The SIS agent should then consume the assigned Uniq-ID and write it to the appropriate location with the SIS application database.

This process depends largely on the ability of the SIS agent to publish SIF objects and events that provide key student demographic and enrollment information, and for the SIS agent to consume (**write-back**) the Uniq-ID it receives to the application database. When configured properly this process works very well and usually within just a few minutes of the initial request. The SIF objects needed to support this workflow are limited to StudentPersonal, StudentSchoolEnrollment, and SchoolInfo. Specific elements can be located within this specification by searching for the keyword "Uniq-ID".

See Appendix section A.2 for the list of fields used as input parameters for the Iowa SLF (Uniq-ID) system.

2 – Breakdown of SIF Objects by State Collection

The table below shows the Iowa DE State Collections and the SIF Objects used to gather their respective data.

Please note that submitting district identifier for all Iowa State SIF collections is provided in LEAInfo/StateProvinceId.

Collections	Objects	Data
BEDS	StaffAssignment, StaffPersonal, SchoolInfo, EmployeePersonal, EmployeeAssignment, LocationInfo	Staff
EASIER	DisciplineIncident, LEAInfo, SchoolInfo, SchoolCourseInfo, SectionInfo, StaffPersonal, StudentAttendanceSummary, StudentSchoolEnrollment, StudentSectionEnrollment, SectionInfo, StudentPersonal, StudentSnapshot, TermInfo	Student
Uniq-ID	SchoolInfo, StudentPersonal, StudentSchoolEnrollment	Student State ID
ITC	StudentRecordExchange, StudentDemographicRecord, StudentAcademicRecord	Student records and transcripts

3 – SIF Object Definition Format

The SIF objects needed for Iowa State reporting are listed in this document and appear in a format very similar to that used in the SIF Implementation Specification, with the following additions:

- For brevity, only those data elements needed for Iowa State reporting or required by the SIF object itself are listed in each object definition. Optional elements not specifically needed for Iowa State reporting have been omitted from this document to help focus on those required to convey Iowa's data and in SIF mapping terms. *Even though not listed here data for SIF optional elements can and should be provided as best practice where possible.*
- A column has been added to explain any business rules or instructions beyond those defined in the Iowa EASIER Data Dictionary or in documents posted on the BEDS website as they relate to this SIF mapping.
- The column "Profile Char" reflects whether an element or an attribute is Mandatory, Optional or Conditional. "M" stands for Mandatory and means that an Agent must provide this field in every instance of this object. The gray cells in the "Profile Char" column highlight the fields that are Optional in the SIF Specification but Mandatory for Iowa State Reporting. "O" stands for Optional in both SIF and Iowa State Reporting.

Table columns are defined as:

Table Key					
Element/Attribute	**Profile Char**	**IA DE Element Code**	**SIF Description**	**SIF Type**	**IA DE Business Rules**
SIF Element or attribute name	Requirement level (Mandatory, optional, conditional, etc.) as required for adherence to this profile.	The identifying IA DE code.	Description as identified by the SIF Implementation Specification 2.4	The data type as defined by the SIF Implementation Specification 2.4	Brief explanations of IA DE Business Rules, or references to notes, or brief instructions for an element

Note that the collection software operates by making SIF Requests for the data it needs for each collection.

4 - SIF Object Definitions

4.1 – SIS Objects

Usage:

This section describes SIF objects that provide student data out of the Student Information System. StaffPersonal is primarily used for BEDS staff collection; however, there are a few elements related to student data that reference StaffPersonal as well. Most of the BEDS assignment data, at the granularity of course assignments and grade levels will be provided by the SIS SIF Agent, via StaffPersonal and StaffAssignment objects.

4.1.1 DisciplineIncident

(SIF Implementation Specification 2.4 - 6.14.5)

This object provides information on incidents involving violence, weapons, drugs, and other safety and discipline issues.

Usage:

For Iowa State Reporting, the DisciplineIncident object is used to represent an Incident, with one or more StudentRemoval occurrences conveyed by the complex Extended Element "IA Profile Extensions". Complex Extended Element, StudentRemoval, allows all the data elements related to a single occurrence of a student removal to maintain their association to each other, and to be repeatable. In addition, these elements allow for Iowa's state-specific codes.
(See XML Example of the DisciplineIncident complex Extended Element "IA Profile Extensions" following the object definition.)

4.3.3 StudentAcademicRecord

(SIF Implementation Specification 2.4 - 6.15.3)

This object conveys a student's academic record data for student record exchange and transcript purposes.

Usage:

Iowa DE districts can have terms with different term spans that run concurrently within a school (building), for instance mini-terms, 4x4 blocks, and semesters. The SIF Implementation Specification allows for multiple terms for historical courses. However, for CurrentCourseActivity courses, the TermInfoData element on CurrentCourseActivity is non-repeatable. In order to allow for multiple term spans (types of sessions) for current courses, Iowa will use the TermInfoData child element on CurrentCourseActivity only for the SchoolYear and use the TermInfoData element on MarkingPeriod to carry the values that define the term for each course, specifically term span (type of session) and term start date.

The CurrentCourseActivity element is only to be used to convey data about courses currently in progress (with future end dates).

For any courses completed in the current school year, the Agent is to provide course data via CourseHistory.

SIF_Events are not reported for this object.

A.1.11 Race Codes – Iowa State Reporting Codes

The Agent is to provide a race list containing NCES0849RaceType codes in the Race Code element.

For student data (StudentPersonal), at least one of the five race codes must be provided. Multiple race codes may be provided.

Iowa Uniq-ID requires a single value, and will make use of the OtherCode element. If there is more than one race element, the OtherCode will carry the same value for all instances of the OtherCode. If the student is Hispanic/Latino, then there will be one instance of OtherCode, and that value will be "H". If the student has three race codes that apply to that student, and the student is not Hispanic/Latino, then all three instances of OtherCode will carry the value of "M". If the student has one race code that applies, and is not Hispanic/Latino, then a value of I, A, B, P, or W should be supplied by the OtherCode.

Below are the instructions for the SIS vendors for calculating this singular code value. (See IA EASIER Data Dictionary and search on "D0035" or "Race/Ethnicity_StateID".)

Uniq-ID Race/Ethnicity Calculations

Calculate in sequence using the first true statement:

If Hispanic / Latino (D0042) = 1 then H or
If two or more of American Indian or Alaska Native (D0043) or Asian (D0044) or Black or African American (D0045) or Native Hawaiian or Other Pacific Islander (D0046) or White (D0047) = 1 then M
[i.e. Hispanic / Latino = 0 and two or more races = 1] or
If American Indian or Alaska Native (D0043) = 1 then I or
If Asian (D0044) = 1 then A or
If Black or African American (D0045) = 1 then B or
If Native Hawaiian or Other Pacific Islander (D0046) then P or
If White (D0047) = 1 then W

Race Codes used for Uniq-ID and to be provided in OtherCode:

Code	Description
H	Hispanic / Latino
M	Multiracial
I	American Indian or Alaska Native
A	Asian
B	Black or African American
P	Native Hawaiian or Other Pacific Islander

A.3 StudentRecordExchange Objects

A.3.1 StudentAcademicRecord - SchoolAttended / SchoolInfoData / SchoolName

For Iowa Transcripts and Student Records, the SIF SchoolInfoData/SchoolName element is used for these values:

- Name of the institution that is providing or provided the course that the student is taking or took.
- Name of the building the student currently attends.

For these two data elements, the Agent is to provide separate instances of SchoolInfoData.

For the Institution Providing the Course section, only provide this element when it is different than the school that normally takes attendance for the student. When the name of the Institution (which can be out of district, even out of state) is not available in the SIS, default this element to the LocalId. This default is only for when the school is different than the attending school.

For the name of the building the student currently attends, the path is Term/SchoolAttendedRefId (most recent).

A.3.2 StudentAcademicRecord - SchoolAttended / SchoolInfoData / LocalId

For Iowa Transcripts and Student Records, the SIF SchoolInfoData/LocalId element is used for these values:

- Local ID of the institution that is providing or provided the course that the student is taking or took.
- Local ID of the building the student currently attends.

For these two data elements, the Agent is to provide separate instances of SchoolInfoData. In terms of consuming the different values, it will be the path to SchoolAttendedRefId that will distinguish the two instances of SchoolAttended mentioned above.

For the Institution Providing the Course (only used when it is different than the school that normally takes attendance for the student), the path is Course/SchoolAttendedRefId.

For the name of the building the student currently attends, the path is Term/SchoolAttendedRefId.

Additional Notes on SchoolAttended / SchoolInfoData / LocalId:

- For the Local ID of the building the student currently attends or attended, the ID will be an 8-digit code of a building within the district.
- For the Local ID of the institution providing the Course section, the ID will be a 6-digit or 8-digit code. The default value is an 8-digit code (district code+0000).

If the Local ID is not available, the Agent is to provide the state assigned value in its place.

The ID of the Institution Providing the Course section (C0050) is described in the Iowa DE EASIER Data Dictionary as such:

"If the institution is an Iowa school district, an Iowa Accredited Nonpublic School, an AEA, or an Out-of-state School, use the eight-digit Destination Location code. If the institution is postsecondary, use the six-digit Integrated Postsecondary Education Data System (IPEDS) code."

For example, a concurrent credit course offered by a community college but taught in the attending district building will have the community college name as the Institution Providing the Course.
