K-12	R		IA.K-12.R Reading is a complex, purposeful, social, and cognitive process in which readers simultaneously use their knowledge of spoken and written language, their knowledge of the topic of the text, and their knowledge of their culture to construct meaning. Reading is not a technical skill acquired once and for all in the primary grades, but rather a developmental process. A reader's competence continues to grow through engagement with various types of text and wide reading for various purposes over a lifetime.

K-12	W		IA.K-12.W Students write to communicate with others and to clarify their own thinking. They need to write frequently in a variety of forms and for a variety of purposes and audiences. Students learn to write well when they are taught strategies for organizing a first draft, writing successive versions, revising, and editing. But students must also learn to write successfully in instances where they are required to write quickly, clearly, and succinctly. Writing can be an effective learning tool for students in all content areas, as they use informal reflective writing to record their observations, experiences, classroom discussions, or to record comments on their reading.

The viewing strand refers to nonprint texts, which are defined as sources of information such as television, film, videotape, live performances, the Internet, and other multimedia technologies. The goal of viewing is to draw meaning from visual media such as television, film, video, live performances, computer software, Web-based technologies, and graphically rich print like newspapers and graphic novels. These visuals may be live or videotaped messages or portrayals, animations, and interactive or static graphics that accompany text. Two specific genres are informational visual media (like Web sites, documentaries, and news programs) and visual narratives (like television situational comedies, film, video, informal and formal theatre, electronic media productions, and graphic novels).
